Research Profile

I build systems where large-scale human participation and AI solve hard computational biology problems together. My flagship project, **Borderlands Science (BLS)** — a citizen science mini-game embedded in Borderlands 3 — has collected **130M+ puzzle solutions from 4M+ players worldwide**, producing novel insights in microbial phylogeny. My work sits at the intersection of **computational biology**, **ML**, **collective intelligence**, and **HCI**, with applications across sequence alignment, phylogenetics, and population-scale microbiome analysis.

Education

PhD in Computer Science, McGill University, Montréal, Canada 2020 – present
Waldispühl Group, Structural Bioinformatics & Citizen Science Lab CGPA: 3.8/4

- Courses: Advanced Comp. Biol. Methods & Research, NLP, Human Computation and Citizen Science, Applied Machine Learning, Probabilistic Graphical Models, Reinforcement Learning, Intelligent Software Systems

BSc in Computer Engineering, Sharif University of Technology, Tehran, Iran 2015 – 2020
Major: Software Engineering CGPA: 17.65/20

- Course Highlights: Game Theory, Algorithmic Game Theory, Information Theory, Data Structures & Algorithms, Computer Networks, Operating Systems, Engineering Probability & Statistics

Publications

- **Playing the Data: Video Games as a Tool to Annotate and Train Models on Large Datasets.**
Ghasemloo Gheidari, P., Chang, K.-H., Sarrazin-Gendron, R., Mutalova, R., Butyaev, A., Szantner, A., Waldispühl, J.
MoFA Workshop @ ICML, 2025 [\[Full text\]](#)
- **Improving microbial phylogeny with citizen science within a mass-market video game**
Sarrazin-Gendron, R., Ghasemloo Gheidari, P., et al.
Nature Biotechnology, 2024 [\[Full text\]](#)
- **Learning the Game: Decoding the Differences Between Novice and Expert Players in a Citizen Science Game With Millions of Players.**
Cai, E., Sarrazin-Gendron, R., Mutalova, R., Ghasemloo Gheidari, P., Blanchette, M., et al.
Foundations of Digital Games (FDG), 2024
- **Player-Guided AI outperforms standard AI in Sequence Alignment Puzzles**
Mutalova, R., Sarrazin-Gendron, R., Ghasemloo Gheidari, P., Cai, E., et al.
Collective Intelligence, 2023 [\[Full text\]](#)
- **Playing the System: Can Puzzle Players Teach us How to Solve Hard Problems?**
Mutalova, R., Sarrazin-Gendron, R., Cai, E., Richard, G., Ghasemloo Gheidari, P., et al.
CHI '23 (ACM CHI Conference on Human Factors in Computing Systems), 2023

Talks and Posters

- **Borderlands Science Automated: Large-scale Reverberations Through Crowd Augmentation** — Flash talk and poster, Canadian Bioinformatics and Human Computation Conference (CBHC), 2026
- **Playing the Data: Video Games as a Tool to Annotate and Train Models on Large Datasets** — Poster, MoFA Workshop @ ICML, 2025
- **Citizen Science Platform for Accelerating Metagenomic Studies in Urban Built Environment** — Poster, D2R Initiative, McGill University, 2025
- **Borderlands Science: Bringing Together Millions of Players for Human Health** — Talk and poster, McGill AMR Symposium, 2024

Research Experience

Research Assistant, Waldispühl Group, McGill University

Sep 2020 – present

- Designed, analyzed, and implemented novel algorithms in BLS for multiple sequence alignment (MSA) using millions of human puzzle solutions
- Designed Crowd Augmentation: a framework for sustainable citizen science using behaviorally cloned AI agents deployed as participants
- Built and maintained BLS Automated (BLSA), instantiating crowd augmentation in a large-scale pipeline integrating MSA, phylogeny, and adaptive Haar-like distances (AHL2) to uncover taxonomic signals at population scale
- Re-engineered AHL2, a novel beta-diversity method, cutting memory usage 200× to enable population-scale analysis. Released as an open-source QIIME 2 plugin.
- Prototyping interpretable representation learning of biological processes (e.g., molecular docking) for human-in-the-loop annotation and decoding
- Designed 3+ citizen-science game prototypes targeting distinct computational biology problems

Research Intern, Computational Biology Lab, Simon Fraser University

Jul 2018 – Dec 2019

Supervisor: Prof. Leonid Chindelevitch

- Improved deconvolution models for pathogen strain heterogeneity in mixed microbial samples

Technical Skills

Languages: Python, C/C++, Java, JavaScript; working knowledge of R, C#, MATLAB

ML & Modeling: PyTorch, TensorFlow, scikit-learn, behavioral cloning, imitation learning, representation learning

Scientific Computing: NumPy, Pandas, memory- and compute-constrained algorithm design, multi-core Linux server workflows

Bioinformatics: QIIME 2 plugin development, multiple sequence alignment, phylogenetic reconstruction, large-scale beta-diversity

Teaching Experience

PhD - McGill University

- Instructor – COMP 370/570 “Introduction to/Fundamentals of Data Science”, Fall 2026 (with Derek Ruths)
- Guest Lecturer – INF889L “Human Computing, Crowdsourcing and Video Games”, UQAM (Instructor: Roman Sarrazin-Gendron)
- Head TA – COMP 330 “Theory of Computation” (Fall 2024) and COMP 251 “Algorithms and Data Structures” (Winter 2024, Winter 2022)
- TA, 13+ semesters – COMP 204, 250, 251, 302, 330, 462/561, 598, spanning intro programming, algorithms, theory of computation, computational biology, and machine learning (2021–2026)

BSc - Sharif University of Technology

- Head TA (Mgmt.) & Project Designer – ce40254 “Data Structures and Algorithms” (Prof. Ghodsi, Dr. Sedighin)
- TA & Assignment Designer – Game Theory, Algorithmic Game Theory, Analysis & Design of Systems, Computer Networks, Engineering Probability & Statistics, and Programming in Python/Java (2017–2019)

Honors and Awards

- **Graduate Research Enhancement and Travel (GREAT) Award**, McGill School of Computer Science — Travel support for ICML 2025, Vancouver. [\[Details\]](#)
- **Top 43 nationally** among 180,000+ applicants, Iranian National University Entrance Exam (Konkour), Engineering Division, 2015

Interests

Video Games · Violin-Cello-Piano · Singing · Basketball
